VIDA PRODUCTS, INC. ESTABLISHES QRC REPAIR AND UPGRADE FACILITY

VIDA Products, Inc. of Santa Rosa, California, the newly formed High Q Filter and Low Phase Noise Oscillator supplier, announces the creation of a quick reaction upgrade and repair facility for YIG-Based Synthesizers previously manufactured by other suppliers such as VertiCom, which ceased operation in late 2002.

Several hardware and software upgrades are available that significantly improve the performance of older YIG-based synthesizers such as the MTS-1000, MTS-1500, and MTS-2000 that were manufactured by VertiCom.

Contact Ron Parrott at VIDA Products to verify that Model numbers to be returned are supported by VIDA and to obtain necessary RMA numbers. After VIDA's evaluation, acceptance of the terms of VIDA's quotation covering the necessary repair and/or upgrade costs will be required before work begins. There will be a \$100.00 per unit charge for those units where no trouble is found or that are determined to be beyond economical repair. Typical turn-around time on repairs and upgrades is 2 to 3 weeks.
