VERTICOM SYNTHESIZER QRC REPAIR AND UPGRADE FACILITY EXPANDED

Vida Products, Inc. of Santa Rosa, California, the magnetically tuned oscillator (MTO) and Frequency Synthesizer supplier, has expanded its repair and upgrade facility to include several unique synthesizers manufactured by VertiCom, a former synthesizer supplier that ceased operations in late 2002. Specifically included are all versions of Model numbers MTS-1000, MTS-1500, and MTS-2000. During the last year, VIDA Products, Inc. has repaired and upgraded several hundred VertiCom Synthesizers thereby dramatically improving existing system performance and significantly extending the operational life expectancy of a number of currently deployed systems.

Contact Hal Tenney at Vida Products to obtain necessary RMA numbers. After VIDA's evaluation of the returned units, a repair/upgrade proposal will be made and customer acceptance of the terms of VIDA's quotation will be required before work begins. Typical turn-around time on repairs and upgrades is 2 to 3 weeks.
