A History of YIG Repair Service

With Vida Products you can be sure that all repairs are completed in a timely manner and that repairs requiring immediate attention can receive a priority status.

We have performed hundreds of repairs of new, old, and discontinued radios and RF assemblies. Our repair warranty is guaranteed for 90 days after shipment, with an extended warranty available upon request.

We have been providing improved performance and superior reliability with repairs of failed out-of warranty YIG modules, including oscillators and PA's from 2 - 23 GHz. Our repaired YIGs have a zero failure rate. Sending YIGs to us for repair is far less costly than the replacement price for new YIGs. This includes transmitter or receiver YIGs for the dual-mode (analog/digital) based microwave radios at various bands. Delivery is just a few weeks after receipt.

Services and Pricing:

There is a minimum evaluation fee of \$200.00 for equipment serviced. This evaluation allows for interaction with you to determine if the repair is economically feasible or if reutilization is the more effective solution. This fee is applied to the cost of any unit repaired.

Please Contact us with detailed information about your defective part. We will contact you providing our competitive repair quote on your equipment and detailed instructions about our repair service conditions.

Each part is replaced with more reliable components, carefully cleaned, aligned, and re-tested to the manufacturer's specifications. If a part is no longer available, we will replace it with an equal superior part that satisfies the original circuit use. Final quality control checks are provided on all units. Test equipment available at our facility insures proper diagnosis and repair.

Let us show you how we can extend the usable life of your YIG based equipment!
